

Tanzania – Arusha

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Tanzania – Arusha GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components Tanzania could include in a comprehensive tobacco control program. The Tanzania-Arusha GYTS was a school-based survey of students in Classes 6 & 7, and Forms 1 & 2, conducted in 2003.

A two-stage cluster sample design was used to produce representative data for Tanzania – Arusha. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 92.6%, and the overall response rate was 92.5%. A total of 2018 students participated in the Tanzania - Arusha GYTS.

Prevalence

- 8.3% of students had ever smoked cigarettes (Male = 11.9%, Female = 4.6%)
- 7.9% currently use any tobacco product (Male = 10.1%, Female = 5.3%)
